1. The following is an examiner's statement of reasons for allowance: None of the prior art of record teach or suggest a machine for producing containers by stretch blow molding, the machine having a continuously rotating turntable supporting at least one molding device comprising an openable mold and a stretch rod which can be sequentially moved by support and driving means, along the axis of the mold so as to stretch the preform during the container production, wherein the means for supporting and driving the stretch rod are mechanical means which comprise: power takeoff means functionally associated with the turntable and able to generate, from the continuous unidirectional rotation of the turntable, two rotary movements of given angular amplitudes of a rocker occurring at two respective predetermined angular locations of the circular route of the turntable, and movement conversion means able to convert the two rotary movements of given angular amplitudes of the rocker into two alternatively descending and ascending opposite linear movements of a drive member along a route substantially parallel to the axis of the mold, the drive member being connected to the stretch rod. The closest prior art (Kauffman et al 4,036,573) discloses a cam operated stretch pin, wherein a second cam varies the pressure of a spring upon the stretch rod, but the reference fails to disclose or suggest movement of a rocker that occur at two respective predetermined angular locations of the circular trajectory of the carousel.
